Scenario overview

BUSINESS CASE

The organization needs 300 managers across North America to apply a performance-review framework consistently. Although managers know the framework, pilot ratings vary. The next review cycle begins in six weeks, leaving limited time to improve calibration.

THE LEARNER TASK

Review the business brief and five case details. Recommend E-Learning, VILT, or ILT, then select an implementation approach. Weigh effectiveness against scheduling, budget, and SME availability before final submission.

EXPERIENCE STRUCTURE

02
Recommendation
Choose a modality

›

03
Implementation
Choose how to deliver it

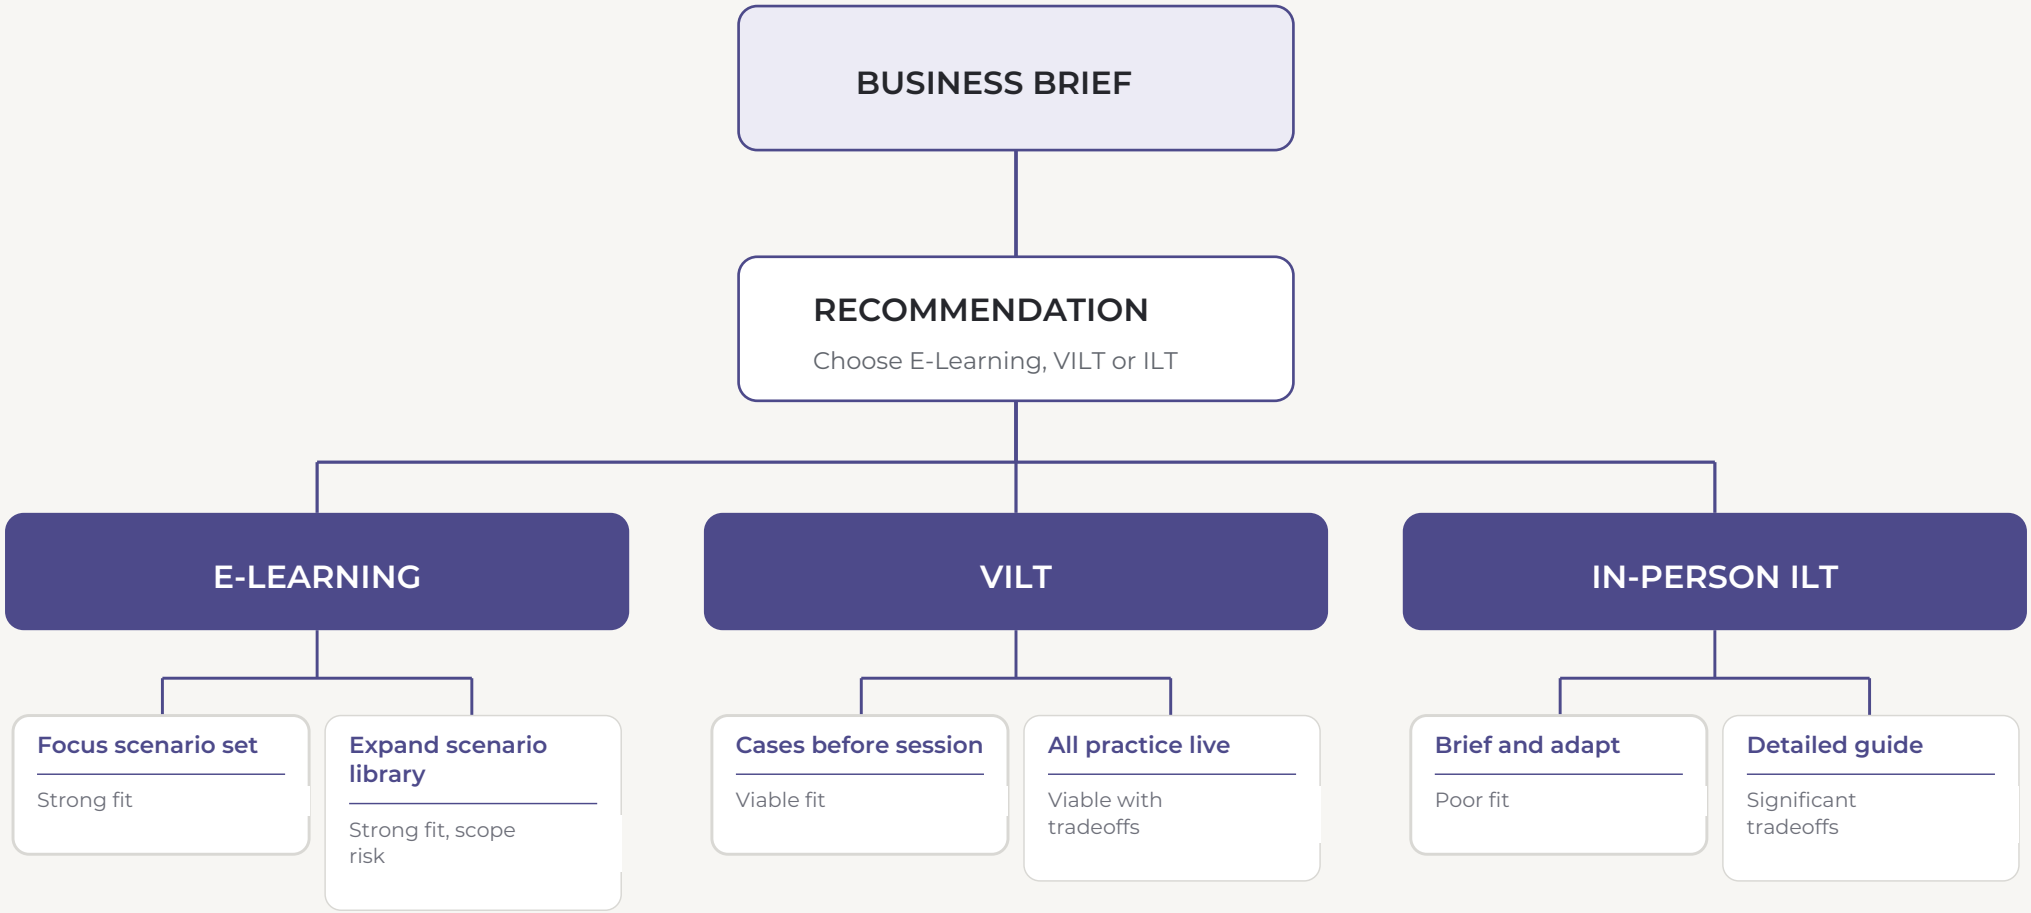

›

04
Feedback
Review consequences

INSTRUCTIONAL STRATEGY

A branching scenario asks learners to defend a modality recommendation under realistic constraints: distributed managers, a six-week deadline, two HR SMEs with limited availability, and restricted live-delivery budget. Each modality leads to a distinct implementation decision and consequence-based feedback.

Decision architecture

INTERACTION NOTES

Each modality leads to two implementation choices and corresponding outcomes. Learners may reconsider their recommendation up to two times before submitting their final decision. After submission, they can restart the experience to explore other choices.
